Document Type: Article; Journal Record Type: Abstract
Treatment: G; (General review)
Language: English Summary Language: English

The security and protection of computer networks was discussed. The need to identify the weakest links in the computer's security system was analyzed. The weakest links were identified as digital certificates, wireless systems, screen savers, employees, e-communications, naivety, internet banking, management inaptitude and complacency. Customized business-process security solutions for both the individual business models and the specific industries were suggested.

Descriptors: Computer system firewalls; Data privacy; Economic and social effects; Risk assessment; Security of data; Software agents; Sustainable development; Technological forecasting; Wireless telecommunication systems; *Computer crime
Identifiers: Wireless weakest links

Classification Codes:
723.2 (Data Processing)
901.4 (Impact of Technology on Society)
902.3 (Legal Aspects)
911.2 (Industrial Economics)

MPEGWIZARD ENABLES USERS TO MAKE VIDEOS

ASIA: NEW MPEGWIZARD ENCODER FROM AVERMEDIA

Asia Computer Weekly (XCF) 25 Jan 1998 P.14

Language: ENGLISH

The new AverMedia MPEGWizard encoder has been launched by AverMedia Technologies in Asia. The MPEGWizard is an external real time MPEG1 encoder that allows users create their own digital video for Web pages, e-mail, CD-ROMs and presentations. The MPEGWizard captures 704 x 576 true pixel-to-pixel image resolutions and 24-bit colour. With the included zoom solution, the encoder captures 1,600 x 1,200 resolutions. It compresses video to 352 x 288 for Pal and 352 x 240 for NTSC. The MPEGWizard encoder plugs directly into a Pentium PC/notebook parallel port, which permits users to capture real time Composite/S video inputs to complete MPEG1 with I, P and B frames. The MPEGWizard includes the following digital video applications: - Duplexx NET TOOB Stream for creating video screen savers, low frame rate and low bit rate playback/streaming - QDesign i-Media Audio driver for real time MPEG audio compression - Astound Studio M to create announcements, multimedia greetings and video photo albums - Cinax i-FilmEdit for video file editing

A new wave of science projects on the Web is harnessing volunteers computers and their brains in new ways. In 1999, a new screensaver program called SETI@home was created, using spare processing capacity on ordinary PCs to sift through radio-telescope data for signs of extraterrestrial intelligence. Thus far, nothing has been heard from any extraterrestrial beings. However, SETI@home is still going strong, with more than 3 million contributors, and it is being joined by a quickly expanding legion of other volunteer computing projects supporting worthy scientific causes. Your PC can now do various things, such as assisting in the design of drugs against AIDS, simulate microdevices for handling satellite propellant, and search for new prime numbers, among other things. Part of the expansion in volunteer computing is the result of an open-source platform for running such projects, known as Berkeley Open Infrastructure for Network Computing (BOINC), launched in 2002 by David Anderson, the director of SETI@home. More than 40 BOINC projects are now in operation, with 15 in the life sciences alone. BOINC makes it simpler for anyone with a research idea to gain access to distributed-computing power. Another development that is increasing volunteer computing is the use of devices other than PCs, especially games consoles and the powerful processors they contain. Competition has led to a noticeable improvement in the software that binds the volunteers together into groups. There is nothing new about networks of amateurs assisting scientists in doing their jobs, but the scientific validity of the work of volunteers must be ensured. To lower the barrier to entry for projects, a new open-source platform—Berkeley Open System for Skill Aggregation (BOSSA)—has been launched to do for distributed thinking what BOINC has done for distributed computing. Researchers are generally excited about prospects for the future.

Abstract:

This workshop article looks at how to create a photomontage by combining a selected image from a photograph with a drawn cartoon background using Adobe's Photoshop 5.0. The resulting creation can then become a screensaver, be used as the screen print for a T-shirt, or printed out as a picture for other uses, such as the title page of a photo album.

Nuance's relatively new Mobile Dictation software will be available through carriers as soon as the first half of 2007 to allow dictation through a cellphone. In testing, the software converted the dictation without any errors in 16 seconds. Nuance and other start-ups are designing new systems that work because they have the advantages of better processing power, new software algorithms, and better microprocessors. One-hundred percent accuracy rates are not unusual with the newest voice-recognition products. The tools, which are creating explosive potential growth in markets for everything from handheld dictation devices to mobile phones to auto parts to battlefield translators will be part of the overall market for voice recognition technology, which was higher than \$1 billion for the first time in 2006. That number was a 100 percent increase in only two years. Increasing demand is prompting investment from well-known voice players and newcomers. Nuance purchased Dictaphone to increase sales in the healthcare industry, and Microsoft's new Vista operating system has voice technology that now gets high marks from reviewers. According to Daniel Hong of Datamonitor, Speech technology is finally transitioning from a cool technology to a business solution.
